Abstract no. 96871/20/CDGA (1st version)

| Product: ANTI-WRINKLE CREAM WITH MELATULINE PURE (5) 01 BATCH/LOT: 20200518 | |
|---|--|
| Report on application and instrumental tests with an opinion of a dermatologist NO 232 665/20/CGDA/ | <p>Objective: Confirmation of product properties declared by the manufacturer.</p> <p>Methodology: Home application test with the opinion of a dermatologist. Instrumental test confirming the effectiveness of the product.</p> <p>Conclusions: On the basis of the application tests carried out, after 28 days of regular application it was found that the product ANTI-WRINKLE CREAM WITH MELATULINE PURE (5) 01 manufactured by MELALEUCA Poland sp.z o.o. [limited liability company] was very well tolerated at the place of application. The tests were carried out on 20 volunteers aged 45-65 years with visible wrinkles: women - crow's feet, men - horizontal wrinkle on the forehead or lines between the eyebrows. On the basis of subjective assessment of the testers, the following properties of the product declared by the Manufacturer were confirmed: * it gives the impression of reduced visibility of wrinkles (80% of positive responses), * it causes adequate facial skin tension (80% of positive responses), * the product improves the skin condition (85% of positive responses), * the product gives the impression of reducing the visibility of discolorations on the skin.</p> <p>The tested product is very well tolerated at the place of application. Negative symptoms and sensations were not observed in all persons during the application and were not found through an interview. Based on the instrumental tests with Primos 3D Lite, the following product effects have been declared by the manufacturer: * reduction of length, amount and surface area of wrinkles after 6 hours following the first application, * reduction of the length, depth, volume and surface area of wrinkles after 24 hours following the first application, * reduction of the length, depth, volume and surface area of wrinkles after 28 days of regular application. For example: * reduction of wrinkles after 6 hours by 7% on average (90% of positive volunteers), after 24 hours by 7% on average and after 28 days by 13% on average (100% of positive volunteers). In the "eye" zone: * reduction of wrinkles after 6 hours on average by 6% (90% of volunteers with positive effect), after 24 hours on average by 6%, after 28 days on average by 9% (100% of volunteers with positive effect). In the "forehead" zone: * reduction of wrinkles after 6 hours on average by 8% (90% of volunteers with positive effect), after 24 hours on average by 8% and after 28 days on average by 14% (100% of volunteers with positive effect).</p> <p>The study was conducted under the supervision of a dermatologist.</p> |
